Want multiple lines? Want to color groups of points?

ggplot needs one variable (column)
with group labels
NOT
separate columns

ggplot(casey, aes(x=year, y=n, color=sex)) + geom_line()

```
> casey
# A tibble: 132 x 5
    year sex
                name
   <dbl> <chr> <chr> <int>
   1950 Female Casey
                         16
   1950 Male
                        117
               Casey
    1951 Female Casey
                        18
    1951 Male
                        154
             Casey
                        28
    1952 Female Casey
    1952 Male
                        180
               Casey
                       31
    1953 Female Casey
    1953 Male
               Casey
                        179
                         34
    1954 Female Casey
   1954 Male Casey 236
