Aesthetics must correspond to a variable

i.e. a column

```
ggplot(unisex_data, aes(x=Male, y=Female, color=name)) +
geom_point() +
geom smooth(method="lm",
                                      se=FALSE)
                 8000 -
                                                          name
                                                             Casey
                 6000 -
                                                             Harley
                                                             Jaime
               Female - 0004
                                                             Jessie
                                                             Kerry
                                                             Marion
                 2000 -
                                                             Peyton
                                                             Quinn
                                                             Riley
                            1000
                                   2000
                                           3000
                                                  4000
```
