```
ggplot(mpg, aes(displ, hwy, colour = class)) +
  geom_point() +
  geom_smooth(method="lm", se=FALSE)
```

# Exercise 1B

Open exercises/exercise1b.r

Run the code to set up the data.  Then:

- Make a scatter plot with Male on the x axis, Female on the y axis
- Color points by name
- Add trend lines for each name (hint: `geom_smooth()`)

**Bonus:** Look at the options for `geom_smooth()` and try other options for smoothing
