Error Bars

```
mydata <- tibble(grp = c("A","B","C"),
                 measure = c(14,16,12),
                 error = c(.3,.4,.8))
ggplot(mydata, aes(grp, measure)) +
  geom_bar(stat="identity", fill="lightgray") +
  geom_errorbar(aes(ymax = measure + error,
                    ymin = measure - error),
                width=.2) +
  theme_minimal()
```

Alternatives to error bars on bar plots and reasons to avoid them: https://www.data-to-viz.com/caveat/error_bar.html
